PRODUCTION AND NATURAL RESOURCES.

I.—NATURE OF CROPS AND QUANTITY OF PRODUCE.

The figures given in this table, except those under paddy, other grains, cotton, and sugarcane, which are for the year 1923, and those under palmyra, which are for the year 1921, are for the twelve months ending September 30, 1921, and have been taken from the Census of Production, 1921. The figures are subject to considerable error, and cannot in any way be guaranteed accurate. It was proposed to show in this table the figures collected at the Census of Production, 1924, but the tabulation was not completed by the time of the Blue Book going to press.

‡ These figures, being those for the twelve months ending September 30, 1921, possibly understate the facts. The Rubber Controller's total of 460,201 for the Island at the end of 1924, is reported to be an overstatement. The total exports in 1924 were 82,660,851 lb.

RETURN OF PRISONS AND PRISONERS.

Replies to the Questions, compiled from the Returns of the respective Superintendents.

QUESTION I.

If the prison is on the separate system, is the separation complete? And if not, what is the separation enforced by day and night, respectively?

All the penal stage prisoners of the Island, if sentenced to over a month, are passed through one of the following jails:—Welikada, Kandy, Jaffna, Anuradhapura, Galle, Batticaloa, Badulla, and Mahara.

In these jails the penal stage prisoners are worked on the separate system as far as can be arranged.

QUESTION II.

If not on the separate system, what provision is there for the supervision of the prisoners while in association ?
The males are supervised by male officers of various grades, and the females by matrons, in all jails.

QUESTIONS III. AND IV.

How many cells are there ; and how many associated wards ? Taking the *average* number of prisoners in jail, how many cubic feet of space are there for each prisoner during the hours of sleep ?

(4) Females, unconvicted.

QUESTION VI.

Is penal labour—that is, labour by treadmill, crank, or shot-drill—in force ?

The penal labour consists of beating coir husk, metal-breaking, and coir yarn twisting. Treadmill work is not in force now.

QUESTION VII.

If so, during what periods of imprisonment, in respect of what classes of prisoners, and during how many hours, is such penal labour enforced ?

This penal labour is enforced during the penal stage, and also in the cases of prisoners reduced to the penal stage as a punishment.

QUESTION VIII.

What kind of labour, other than penal labour, is in use ?

With the exception of a small number reserved for jail service, the prisoners were employed as carpenters, sawyers, blacksmiths, tinkers, masons, sweepers, wood choppers, tailors, bookbinders, painters, shoemakers, printers, weavers, dhobies, mat makers, rope twistors, cooks, sledgers, miners, fencers, weeders, hospital attendants, cabook-cutters, door rugs, brooms, and rattan basket makers.

QUESTION IX.

If the prisoners are employed beyond the walls of the jail, state—

(1) On what kind of work they are so employed ?

At *Welikada*, the convicts were employed in sweeping in the Government Printing Office, and as carpenters, blacksmiths, tinkers, weavers, washers, bootmakers, tailors, &c.

At *Mahara*, in mining, sledging, stone-cutting, metal-breaking, loading wagons with rubble and metal, and repairing railway line, &c.

At *Bogambra*, sweeping and quarrying, rattanwork, tailoring, and as carpenters, &c.

At *Anuradhapura*, in sledging, stone-breaking, paddy husking, paddy cultivating, jungle clearing, &c., at Dry Zone Experimental Garden, Puliankulam, and under the Malariologist in and around the town.

At *Jaffna*, on reclamation work.

At *Batticaloa*, on Karayoor reclamation work for the Local Board.

At *Badulla*, *Galle*, and *Negombo* (Convalescent Prisons) in basket making and other light works, supplying Local Board with metal, and town improving.

(2) How are they supervised ?

By a Superintendent, Assistant Superintendents, Jailers, Deputy Jailers, Overseers, Sub-Overseers, and Guards.

(3) How many escapes of prisoners, while being employed beyond the jail, have taken place during each of the last three years ?

3 in 1922, 2 in 1923, and 3 in 1924.

Total escapes are as follows :—

WESTERN PROVINCE.						NORTH-CENTRAL PROVINCE.					
Jails	1922.	1923.	1924.			Jails.	1922.	1923.	1924.

Mahara	..	1	..	—	..	—	Total of the Jails of Ceylon	..	3	..	2
											3

(4) How are the profits of their labour accounted for ?

An account of the labour contributed to each work is kept, from which the reply to Query XI. is compiled, but no money passes, nor is the labour paid for, except where articles manufactured in prisons are sold, when the actual cash realized is paid into the nearest Kachcheri and brought to account as revenue. The amount recovered on account of metal is also credited to Government.

METEOROLOGY.

METEOROLOGY.

General Remarks.—There is a marked variation in climate between the different parts of Ceylon. In the low-country, with a mean temperature of the order of 80° F., a noticeable feature is the small range of both temperature and pressure. There is, however, wide divergence between the moist conditions in the south-west of the Island, where the average annual rainfall varies from 100 to over 200 inches, and the dry zone areas of the north, north-west, and south-east.

2. Altitudes up to 8,000 feet occur inland, and there the temperature is cooler, and shows a bigger range. There is a corresponding change in vegetation, and the conditions are altogether more akin to those in the temperate zone.

3. *Rainfall.*—The area in which the total rainfall of 1924 was above average included practically all the south-west quadrant of the Island and extended along the south coast, and also up the west coast nearly to Puttalam. It also included an appreciable area north of the main hill country (*e.g.*, Nalanda, Dambulla) and parts of the Eastern Province (notably in the south of that province). In the central hills there were variations both above and below average with a slight preponderance of the latter. Practically the whole of the north of the Island and the greater part of the east side had deficient rainfall, comprising in all an area about equal to that in which the rain was above average. As regards individual stations Carney (Adam's Peak) once again leads with 288·7 inches, Kenilworth being next with 233·1. At the former station the average is 231·8 so that the offset is 56·9 inches above it. Other stations with offsets of over 50 inches were Anningkanda and Urubokka, while offsets of over 40 inches were recorded at Labugama, Keragala, and Panilkanda. The offset at Colombo was within a few points of 40 inches and though not quite so great as those mentioned above caused sufficient inconvenience to attract some attention.

September 29-30 holds the record for the highest fall in 24 hours, a list of 46 stations at which over 5 inches fell on that day being headed by Maliboda and Carney with approximately 12 inches each.

At the other extreme Marichchukaddi still holds the minimum average (34·3), but the lowest totals for the year were recorded rather further north. Elephant Pass, Saltern 22·9 leads from the Elephant Pass, Public Works Department Station 28·2. Other stations under 40 inches were Killinochchi, Pallai, and (in the south-east area) Panama.

4. *Temperature.*—In 1924 only one station, Nuwara Eliya, had a mean temperature that differed by as much as a degree from its own average, namely, 60·4 or 1·2° F., above its average of 59·2. This station is the highest at which regular observations are made (6,000 feet) and hence is usually the one at which the lowest temperatures are recorded. This year its air temperature on one occasion got below freezing point (31·6° on December 28), and the surface thermometer which is usually a trifle lower than the air thermometers got below 32° F on nine occasions. Its record minimum air temperature is 27·1° F which was recorded on February 8, 1914. At the other extreme Trincomalee holds the records both for highest average shade temperature (82·9° F) and highest shade temperature on record (103·7° F on May 12, 1890). The corresponding figures at that station for 1924 were 82·8 and 97·6 though the highest shade temperature recorded in the Island during the year was 98·9 at Anuradhapura on September 7.

At Colombo the mean temperature of the year was 81·0° or 0·2 above its average of 80·8°. The extreme readings were 93·5 and 66·7—both recorded during March.

The mean daily range, *i.e.*, the difference between the mean of the maximum and the mean of the minimum was highest at Badulla 17·6° F and lowest at Galle 7·8° F. At Colombo and Kandy it was 11·9° F and 16·0° F, respectively. The absolute range for the year, *i.e.*, the difference between the highest and the lowest readings actually recorded at any one station was greatest at Nuwara Eliya (47·5° F) and lowest at Galle (19·3° F.)

The air temperature (both wet and dry) are taken at a height of from 4½ to 5 feet above ground level in open sheds.

These sheds are all about 10-12 feet square and though not absolutely identical in dimensions are sufficiently similar for the results to be comparable, in each case the roof is supported by four corner pillars, usually of bricks, and the intermediate space is closed in with wire netting. In one or two cases a light blind has had to be added to prevent sunlight getting under the eaves in the early morning or late evening, but in no case is this obstruction enough to interfere appreciably with ventilation.

Photographs of several of the actual sheds can be seen in the frontispiece of the report for 1913.

In the above table the tendency for both extremes to occur at the same time of year is noteworthy, and calls attention to the fact that in the tropics variations in cloudiness have a greater importance relatively to variations in the sun's declination than is the case in the temperate zones.

TABLE VIII.—Percentage Humidity for 1924 calculated from the Dry and Wet Tables issued by the Indian Meteorological Department. Figures in ordinary type are from the 9.30 and 3.30 readings, and so derived from temperatures that are rigidly comparable to each other, but give no detail of night conditions. The figures in *italics* give the mean of the humidity as derived from the maximum temperatures and as derived from the minimum. This only admits of approximate physical interpretation, since the dry and wet thermometers do not necessarily reach their extreme values simultaneously. It is, however, a serviceable approximation for several purposes, as it does include an indication of the conditions at night.

TABLE X.—Offsets of the 9.30 and 15.30 Air Pressure Readings of the Year 1924 from the Average expressed in decimals of an inch of mercury.

Taking one millibar as roughly equal to 0.03 inch of mercury, it will be seen that offsets of as much as a millibar were very rare.

* Mean for 11 Months.

The velocities in Table XI. are in most cases above the averages for these stations, and it is probable that the actual velocities this year were higher than usual Average values, and Numerical offsets are not given as the former would probably be unduly small and the latter unduly great owing to the sites of the instruments having been improved in recent years.

The wind values given for Little Basses Lighthouse are face values of the instrument, owing to the difficulty of standardizing instruments here for the high values so frequently experienced.

The anemometer was changed, owing to a breakdown, at the beginning of August.

Table XII.—High Velocities of Wind at Colombo (Fort) during 1924.

This Table gives the times at which the highest velocities were recorded at Colombo (Fort). In the absence of recent Kew certificates for the instruments concerned, the numerical values below can only be accepted as approximations, roughly comparable among themselves, but not precise. The time given is Ceylon Standard Time, 5½ hours ahead of Greenwich. The instrument was out of action for several days in June, and occasionally for short periods, none longer than a day, during the rest of the year.

Gusts in which the wind showed a sharp change in direction from what it was just before are denoted by a*. In many of these the wind seemed to change considerably in direction during the gust itself. In such cases the change during the gust is given in the table, e.g., the gust on February 27 veered from ESE to SSE, the wind just previous to the gust having been much lighter, and from the WNW. It will be noticed that most of the cases marked with an asterisk occur in the early evening between 16h. and 20h., the remainder being in the early hours of the morning.

* The gauge at Bandarawella, where observations have been taken since 1871, was discontinued in November, 1921. Observations were recommenced in January 1922, at another station, but about two miles away from the first. Averages from the first station are therefore published for approximate comparison with the yearly means from the record.

TABLE XIV.—Maximum amount of rain falling in any consecutive periods of 1, 2, 3, 4, &c., days during the year, for selected stations. This table replaces the table “Periods of Continuous Drought and Rain during the Year,” that appeared in previous reports. The stations selected are the sixteen principal stations, five stations that report rainfall daily, and, in addition, Carney and Watawala, representing that area on the south-west slopes of the hills, which receives the heaviest rain during the South-west Monsoon, St. Martin’s, representative of the corresponding area on the other side of the hills for the North-east Monsoon, and Koslanda, just below the steep south-eastern shoulder of the hill country.

The figure under each number represents the maximum amount of rain falling on that number of consecutive days during the year, the different figures for each station not necessarily referring to the same wet spell. For example, at Watawala, 23·75 inches fell on 5 days, from September 27 to October 2, while 26·68 inches fell on 6 days, from August 10 to 16.

The series is terminated for each station when the intensity of rainfall falls below 2 inches per day. In the case of wet spells occurring in December and January, they are considered as belonging to the year in which the greater portion of the rain fell. This year there were no cases of this description.

HARBOURS.

QUESTIONS.

At bar or entrance, what is—

- (1) The minimum width ?
- (2) The minimum navigable depth, low water ordinary spring tide ?

Note.—If between the entrance and the deep sea there are bars or shoals where a lesser depth occurs than the minimum indicated above, a list of such obstructions and of the depths over them (low water ordinary spring tide) should be given.

2. In the approach channel from bar or entrance to berthing accommodation, what is—

- (1) The minimum and maximum width ?
- (2) The minimum and maximum depth, low water ordinary spring tide ?

3. What is—

- (1) The rise and fall of tides—
 - (a) Ordinary springs ?
 - (b) Ordinary neaps ?
- (2) The rise of ordinary neaps above low water ordinary spring tide ?

4. What is the maximum available depth of water—

- (a) At piers or wharves low water ordinary spring tide ?
- (b) In the case of enclosed docks in the entrance locks, if any, and at dock quays, high water ordinary neap tide ?

5. What are the respective lengths of piers, wharves, or (in the case of enclosed docks) dock quays, where the maximum depth of water, referred to in Question 4, exists ?

What percentage does the total of these lengths bear to the total accommodation at the port ?

6. What are the dimensions (length, loaded draught, and beam at that draught) of the largest vessels which, under existing circumstances, can be—

- (a) Berthed alongside any pier or wharf (low water ordinary spring tide) ?
- (b) In the case of enclosed docks—
 - (1) Admitted direct to ; or
 - (2) Admitted through the entrance lock of any important dock or docks, high water ordinary neap tide ?

7. What are the dimensions (length, breadth, and depth over sill high water ordinary neap tide) of the largest dry dock or floating dock in the port ?

8. Are operations in progress to increase the depth of water—

- (a) At the entrance and in the approach channel ?
- (b) In the case of enclosed docks at the entrance lock, if any, of any important dock or docks ?
- (c) At the principal berths to 40 feet at low water ordinary spring tide (in the case of the berths at enclosed docks, high water ordinary neap tide), and is accommodation being provided for vessels 1,000 feet in length and of 100 feet beam ?

If not, to what extent is deepening being effected, and for vessels of what dimensions (length, draught, and beam at that draught) is accommodation being provided or in contemplation ?

Practically all the eastern half has a depth of 27 feet, and a considerable portion has now been dredged to 33 feet below low water ordinary spring tide.

There are two berths available at all seasons for vessels drawing up to 33 feet of water ; one being of unlimited length, and this number is being increased. There are three jetties and one pier available for shipping as follows :—

Discharge Jetty, 200 feet long, where vessels of 500 feet length and 25 feet draught can be berthed.

Outer Bunkering Jetty, where vessels of 550 feet length and 27 feet draught can be berthed.

Inner Bunkering Jetty for bunkering barges only.

Guide Pier, length 800 feet, at present available for vessels of 27 feet draught, when not required for docking purposes.
